

src.qubitization.pauli
_polynomial_class.PauliPolynomial

```
graph RL; A["src.qubitization.pauli_polynomial_class.fermion_minus_operator"] --> C["src.qubitization.pauli_polynomial_class.PauliPolynomial"]; B["src.qubitization.pauli_polynomial_class.fermion_plus_operator"] --> C;
```

The diagram illustrates a relationship between three Python classes. On the left is a gray-shaded box representing the class `src.qubitization.pauli_polynomial_class.PauliPolynomial`. On the right are two white boxes. The top box represents `src.qubitization.pauli_polynomial_class.fermion_minus_operator` and the bottom box represents `src.qubitization.pauli_polynomial_class.fermion_plus_operator`. Blue arrows point from each of these two boxes on the right towards the gray box on the left, indicating that `PauliPolynomial` inherits from or is related to both parent classes.
