```
graph LR; A["src.qubitization.pauli_polynomial_class.PauliPolynomial.__mul__"] --> D["src.qubitization.pauli_polynomial_class.PauliPolynomial.count_number_terms"]; B["src.qubitization.pauli_polynomial_class.PauliPolynomial.__rmul__"] --> D; C["src.qubitization.pauli_polynomial_class.PauliPolynomial.visualize_polynomial"] --> D;
```

The diagram illustrates a mapping from three source methods to a single target attribute. Three light gray boxes on the left, each containing a source method name, have blue arrows pointing to a single dark gray box on the right containing the target attribute name. The source methods are `__mul__`, `__rmul__`, and `visualize_polynomial`. The target attribute is `count_number_terms`.
